

TILESTONE

POOLS & SPA'S

The smarter alternative to concrete pools

Tilestone Pools are made for pool builders who want to deliver high-end tiled pools faster, easier, and without concrete.

Using a carbon steel frame & composite panel system, each pool is shipped monoblock, or in modular sections and assembled on-site — **even in places where concrete pools can't reach.**

Builders can now complete projects in weeks instead of months, less labor, no formwork, less structural weight and a perfect tiled finish every time.

Structural Efficiency

Lightweight frame with high tensile strength ensures load stability with minimal foundation requirements.

Modular Transportaion

Shipped monoblock, or in modular sections and assembled on-site — Ideal for rooftops, gardens, indoors and remote locations

Precision Manufacturing

Factory-engineered, guaranteed dimensions, accuracy & watertight assembly — no leaks, cracks, or guesswork.

Time Optimization

Up to 70% faster completion than traditional concrete, reducing project timelines and overhead costs, and Integrates seamlessly with standard plumbing, electrical, and filtration systems.

Luxury Aesthetics

Premium ceramic tile finish or nature stone finish for a flawless, enduring surface your clients will love.
